

BALTIMORE ORIOLE

This brightly-colored bird perches, feeds, and nests in trees.

GREATEST THREAT

Deforestation for agriculture or urban development reduces the habitat available for the Baltimore Oriole.

HOW CAN YOU HELP?

Drinking shade coffee and cocoa protects forests that resident and migratory birds depend on during the winter.

Many birds, including the Baltimore Oriole, benefit from joint efforts to conserve biodiversity. COMCAUSA (1994) is an agreement between the U.S. and Central American countries to prioritize biodiversity conservation, clean energy, environmental legislation, and sustainable economic development.
